

The Studio, chapter one.

Canonical master for implementation.

One source of truth for the fourteen states, the thirteen junctions, all copy, the light system, the Ledger, the Questions interaction, the Contact behaviour and the Hero time treatment. **Nothing in this document is new.** Every value here is a decision already approved in the storyboard; where a number was measured, the measurement is quoted rather than restated.

Coordinates are given in the storyboard's **1440 × 760** reference frame and scale linearly to the production canvas. *x196* is the type margin; *x38* is the Ledger rail; the right margin is 196 for body measures and 38 for corner marks.

1 • THE THREE LAWS

Release in place

Before any move, the outgoing state falls to zero where it stands. Nothing translates out, nothing slides, nothing reflows.

One element survives

Each junction carries exactly one element across and repurposes it — a numeral, a word, a rule. The survivor is never re-created.

Exposure carries

continuity

Grounds change by grade on one photograph, never by swapping a background. Three plates carry all fourteen states.

Verb ledger — no mechanism is used twice for its primary effect: displace • displace-and-inherit • expand • accumulate • change register • decompose • lift • superimpose • extinguish • survive • relight • persist. Twelve verbs across thirteen junctions, plus one reversible aside for Work.

2 · COMPLETE CHRONOLOGICAL SEQUENCE

#	STATE	PLATE	EXPO	LEDGER	ANCHOR
01	Hero — Chapter One	hero	.50	mark only, 20%	96px serif, x196, baseline y462
02	Chapter II	hero	.35	mark only, 16%	numeral origin x756
03	Philosophy	hero	.10	mark only, 16%	“Philosophy” rests on x756; II travels 196px to x560
04	Thesis — every unforgettable moment	none · #060605	—	mark only, 16%	64px serif, x196, centred vertically; ember at 68% / 32%
05	The occasions	none · #050504	—	mark only, 16%	stack on one optical centre: 46px / 100%, 31px / 34%, 22px / 12%
06	Some moments deserve another chapter.	venice	.13	mark only, 22%	52px serif, centred; warm source upper right
07	Chapter III — what we actually make	venice	.09	mark only, 24%	lockup origin x752; held 2.8s
08	The Ledger writes itself	venice · panned 20%	.19	index drawn, WORK lit	strokes stack at x38 y236; rules extend downward
09	The work — Wedding Experience	venice	1.00 · true	exposure .32, Work active, chapter III	80px serif, x196, bottom 74; brightest state on the site
10	About — we stay close to every detail	studio	1.02	exposure .58, About active	104px at x196 · second principle 46px at x838
11	Method — what makes it yours?	studio	.12	exposure .08, Method active	62px serif, x196, bottom 142; seven overheard lines 15 → 36px
12	Your experience	studio	.20	exposure .14, Method active	104px serif, x196, y262 — largest type on the site
13	Questions — warm stone	hero · sky band, graded	ground 160-171	ink #171613, exposure 1, Questions active	64px heading y86; seven 76px rows from y213
14	Contact — the threshold	hero	.72	ink #f2e9dc, exposure .8, Contact active	92px serif y152; writing line y529

Light shape of the film: 01 dusk → 03 trough → 06-07 warm dark → **09 peak, true exposure** → 11 deepest value on the site → 13 first light → 14 dawn threshold. Two grounds only: the warm dark, and warm stone at 13 (ground values 160-171, R-B +26, worst case 7.15 : 1). Every other state is a grade of one of three photographs.

3 • FINAL APPROVED TRANSITION FOR EVERY JUNCTION

JUNCTION	VERB	MECHANISM • WHAT SURVIVES	TIME	REF
01 → 02	displace	“One” releases, “Chapter” holds and the numeral II takes its place — the name is the system. Video continuous, exposure only.	3.40s	21
02 → 03	displace + inherit	II travels 196px left and “Philosophy” inherits the coordinate it vacated, x756. Moves overlap. The grammar every later junction obeys.	—	18
03 → 04	expand	The label expands into the sentence that defines it — the word is defined by what follows it.	—	19
04 → 05	hold	Both frames are type on warm dark with the negative beneath at -6, so material continuity already holds. Open: plain hold vs a short authored beat. Non-blocking.	—	18
05 → 06	accumulate	The occasions stack and leave a trace; the sentence is written over the residue. Centred, layered, no side entry.	4.20s	24
06 → 07	change register	“chapter.” changes register in place and becomes the Chapter III lockup. No travel.	—	18
07 → 08	decompose	The numeral decomposes into three strokes which stack into the mark; the index is drawn out of it top to bottom, rule length encoding depth.	2.90s	13
08 → 09	lift	Exposure lift only — the negative was always there. The frame pans off the canal; the work comes up to true exposure.	—	18
09 → 10	superimpose	Double exposure on a shared light source: the sun becomes the lamp, one light belonging to two environments.	—	14
10 → 11	extinguish	The lamp goes out and the room goes with it. No surface change, no cut.	—	11
11 → 12	survive	One word survives the question and is still in the answer: <i>yours</i> → <i>Your</i> . The field converges into one line.	—	26
12 → 13	relight	One room, one continuous relight: night → blue hour → first light. No background swap at any point.	—	15
13 → 14	persist	The rule does not move. Rule 06 sits at y529; Contact’s writing line resolves to y529. The list releases around it, the ground turns under it, the environment lands and holds empty for 300ms, then the conversation is written on the same line. Full spec in §7 and §8.	3.60s	30

JUNCTION	VERB	MECHANISM • WHAT SURVIVES	TIME	REF
aside	reversible	The route into Work: an aside carried on the leader rule from the Ledger. The Ledger is the door and the film does not stop. Reversible.	—	27

4 • FINAL COPY

01 HERO

Chapter One

Where moments become digital

I of III

It's XX:XX where you are.

04 THESIS

Every unforgettable moment deserves an experience.

06-07 CHAPTER III

Some moments deserve another chapter.

Chapter III

What we actually make

09 THE WORK

Wedding Experience

Raquel & Flávio

28 • 08 • 2027 — VENICE

Other experiences →

11 METHOD • IN SEQUENCE, 15 → 36PX

“Is everyone here?” 15 • “Nobody planned that.” 16
• “Wait — look at this.” 17 • “Leave it like that.” 18 •

“Did you see that?” 21 • “That wasn't meant to happen.” 26 • “It's starting.” 36

What makes it yours?

Nobody is asked to answer. The studio is listening.

02-03 CHAPTER II

Chapter II

II Philosophy

05 THE OCCASIONS • THE STACK

A wedding. • An artist. • A final performance.

One optical centre, three sizes. “A wedding.” 46px / 100% • “An artist.” 31px / 34% • “A final performance.” 22px / 12%. Each new occasion **displaces the previous one upward** on that centre; the earlier occasions remain as residue, which is what junction 05 → 06 then writes over.

Forbidden: lateral or side entry • depth scaling • horizontal spreading • any per-occasion x offset. The three occasions never separate horizontally.

08 THE LEDGER

Chapter One • I / II / III

Work • About • Method • Questions • Contact

10 ABOUT

We stay close to every detail.

We work directly with our clients from the first conversation to the final detail, shaping every experience around the occasion itself.

Built exclusively for you.

No templates. No copies. Nothing made to fit twice.

12 YOUR EXPERIENCE

Your experience

Built around what makes yours unique.

Is there something that deserves its own experience?

Tell us about it.

ONE EXPERIENCE AT A TIME

DIRECTLY WITH THE PEOPLE BUILDING IT

CLEAR COMMUNICATION, FROM START TO FINISH

13 QUESTIONS • THE SEVEN PAIRS, LOCKED

1. What do you actually create?

We design and build digital experiences for occasions that happen once — weddings, exhibitions, performances, openings. That ranges from an immersive website to something built entirely around the occasion itself.

2. Do I need a website?

Not always. Sometimes a website is exactly right. Sometimes the occasion needs something else. We work that out with you before anything is designed.

3. How does a project start?

With a conversation about the occasion — what is happening, who it is for, and what people should leave with. Format comes after that, not before.

4. How are projects priced?

There is no fixed package. Cost depends on what we are making and how far it goes — a focused site and a full experience are different pieces of work.

5. How long does it take?

Weeks for something focused, longer for something built from nothing. We set the timeline against the date that matters, because in this work that date usually cannot move.

6. Can you work with the people already involved?

Yes. Planners, photographers, curators and producers are often already in place. We can work alongside them, or take the digital experience from first idea to launch.

7. What happens after the experience is live?

It arrives ready to share. We can also continue to host, maintain and update it after launch, when needed.

5 • VISUAL AND LIGHT SYSTEM

TYPE

Two families, no others. **Cormorant Garamond 300** for every statement — 104px (About, Your experience), 96px (Chapter One), 92px (Contact), 80px (the work), 64px (thesis, Questions heading), 62px (Method), 52px (Some moments), 46px (second principle; the occasions, first), 31px (question rows; the occasions, second), 22px (the occasions, third), 21px (Tell us about it). **Schibsted Grotesk** for every label and micro-caps: 16-17px body, 11-12.5px chapter lockups at .42em, 9-10px marks at .20-.34em. Monospace never ships — it is storyboard annotation only.

GRID

Type margin **x196**. Ledger rail **132px** wide, padded from **x38**. Body measures end at right 196; corner marks at right 38. Chapter origins x756 (II) and x752 (III). Questions rows 76px on 1px hairlines. Contact writing line y529.

COLOUR

Warm dark grounds #050504 → #060605 with warm radial sources at 6-24% (upper right, or 74% / 26-60%). Light ink #f2ece0 / #fdf6e8 / #f7efe2. Warm stone ground values **160-171** with R-B **+26**; ink #171613; worst-case contrast **7.15 : 1**. Gold #c9a86a is documentation only and does not ship.

THE ENVIRONMENT

One persistent environment system, mounted at the Hero and **never unmounted, never torn down, never display:none** for the whole session. **“Never re-sourced” governs the system, not the file:** it does not require a single media source containing hero → venice → studio, and no such master is specified — the system holds the three canonical plates and presents each according to state. Sections change its grade, its transform and its playbackRate — nothing else. **Three plates** carry all fourteen states: hero (01-04, 13, 14), venice (06-09), studio (10-12). Warm stone at 13 is a *grade of the hero plate*, not a fourth plate — see §11.

6 • LEDGER BEHAVIOUR

A single persistent rail, 132px, present from state 08 onward and never re-created. It carries the three-stroke mark, the chapter numerals I / II / III, the five destinations and an optional note. Its parameters: **ink** (crosses dark ↔ light with the ground, never on its own clock), **exposure** (0.05-1), **active** destination, **chapter**, **revealed** and **unlit**.

Rule length encodes depth. The active destination's leader is longest; unvisited destinations show no rule at all. In the index reveal at 08 the destinations are drawn out of the numeral top to bottom with WORK lit first, and rule length reads as distance rather than as selection.

The Ledger is the door. The route into Work is an aside carried on the leader rule, and it is reversible: leaving Work returns the rail to the state it was in, with the film still running.

7 • QUESTIONS INTERACTION

Seven rows, one heading, editorial rather than accordion. Rows are 76px tall from y213 on 1px hairlines at 212 / 289 / 366 / 443 / 520 / 597 / 674 / 751. Question 31px Cormorant, marker + / – at 19px on the right margin. **Progressive disclosure:** a row opens on + and closes on –; the answer sets beneath the question in

the row’s own measure. Multiple rows may be open. No row animates position; the list grows downward and nothing above it moves.

Implementation requirement, non-negotiable. The eighth rule — the closing rule at **y529** in the scrolled last-row state — must be **owned by the page, not by the list**. It is one DOM node that persists into Contact. If it is a child of the accordion, leaving Questions unmounts it, and the entire locked 13 → 14 mechanism becomes a coincidence the visitor cannot verify.

8 · CONTACT BEHAVIOUR · THE PERSISTENT LINE

PROPERTY	QUESTIONS	CONTACT	RULE
y	529	529	never animated
left origin	196	196	never animated
measure	1048px	732px	animated once, at 2.90s, right edge only
weight	2px	1px	animated once, at 2.90s
ink	rgba(23,22,19,.50)	rgba(247,239,226,.50)	crosses with the ground, not on its own clock

Beats: 0.00s hold 400ms · 0.40s release in place, 900ms, 40ms stagger, all seven other rules included · 1.30s crop opens on the same negative, wash lifts, ground darkens to the Contact grade, rule ink crosses, 900ms · 2.20s environment lands and **holds empty for 300ms** — ground, Ledger, one rule · 2.60s headline, then “Tell us about it.” at 2.80s directly above the rule · 2.90s rule shortens and thins · 3.20s section label, arrow and the three lines, 120ms stagger. Total **3.60s**.

Geometry. The Contact copy block sits at **y468** and its writing line resolves to exactly **y529**. The four contributions are fixed and are listed here in full so the line can be calculated rather than guessed:

CONTRIBUTION	HEIGHT	SPANS	DEFINITION
block top	—	y468	the copy block’s top edge, x196
“Tell us about it.”	24px	468 → 492	21px Cormorant 300 on a 1.14 line box — $21 \times 1.14 = 23.94$, rounded to 24
gap	16px	492 → 508	margin between the line of type and the rule row
rule row	21px	508 → 529	set by the arrow’s line box — 16px Schibsted on 1.30 = 20.8, rounded to 21; the rule is bottom-aligned in the row, so the 1px stroke lands on the row’s lower edge

Arithmetic: $468 + 24 + 16 + 21 = 529$. The rule’s own 1px weight sits on that boundary and is not additive. If a build substitutes a different line-height for either the 21px type or the 16px arrow, the block top moves to preserve y529 — **the line is the constant, the block top is the variable**.

Copy, sizes and measures of the approved Contact state are unchanged by this placement. Contact copy resolves only after the environment has established itself; the arrow and the three lines settle last.

9 · HERO TIME TREATMENT — DIRECTION B, EMBEDDED

The time belongs to the scene. “It’s XX:XX where you are.” is composited into the plate inside the dawn glow, so its contrast is made by the footage and not by us. It has no ink of its own: it is the photograph, one stop up, in the shape of a sentence.

PROPERTY	VALUE	NOTE
copy	It’s HH:MM where you are.	exact wording · 24-hour · no seconds, no zone, no AM/PM
type	30px · .12em · uppercase · right-aligned	Schibsted Grotesk · no serif, no italic
position	right 104 · top 196 · box 520 wide	inside the glow, diagonally opposite the title; never over the title’s third
composite	blend layer + 12% floor, one box	screen/overlay over the plate · effective range 12–70% · both layers share one string and one letterspacing
capture	one read at mount, held	no interval, no rAF, no re-read on focus, visibility or resize. Not a clock.
in	1.20s → 1.90s, opacity only	written after the title has settled; nothing translates
out	by exposure, no keyframe	the 01 → 02 exposure drop .50 → .42 removes it; the locked transition is unchanged
fallback	floor layer only, 30%	where mix-blend-mode is unsupported · degrades to a quiet flat line, never to a box
forbidden	box · border · backdrop · shadow · icon · hover	any container turns it back into interface

Two production notes. The element must sit inside the Hero’s media stack, above the plate and below nothing else — composite it in the interface layer and the blend picks up the page instead of the footage, and the treatment dies. Proof the pair against the loop’s brightest pass as well as its darkest: if the glow pushes the blend layer past roughly 70% the sentence starts to compete with “Chapter One”, in which case the blend layer’s alpha comes down — *never the floor*.

10 • STATUS

LOCKED — DESIGN CLOSED, DO NOT REVISIT

ITEM	DECISION	REF
Sequence · 14 states	Order, grounds, exposures and anchors per §2	18
All copy	Verbatim per §4, including the seven Q&A pairs and Contact	18
Hero → Chapter II	Displacement, 6 frames, 3.40s, exposure only	21
Occasions → Some moments	Stack leaves a trace, 6 frames, 4.20s	24
Chapter III → the Ledger	Decomposition into three strokes, 2.90s	13
Your Experience → Questions	Continuous relight, no background swap	15
Questions → Contact	The rule does not move · persistence · 3.60s · §8	30
Questions state + interaction	Warm stone, seven rows, progressive disclosure, 7:15 : 1	16 · 17
Contact state	Hero returned, one question, one ruled line, copy block y468	18 · 30
Ledger	Persistent rail, rule length encodes depth, reversible Work aside	13 · 27
Hero time treatment	Direction B, embedded · §9	33
Environment contract	State 09 model and the three-plate model · §11	§11
Type, colour, grid, light	Two families, two grounds, one video · §5	12 · 18

IMPLEMENTATION DETAIL — ENGINEERING'S CALL, WITHIN THE LOCKED DESIGN

- Blend mode choice (screen vs over1ay) for the Hero time, tuned against the real footage. The 12% floor and the 12-70% range are fixed; the mode is not.
- Easing curves not quoted here. Where a junction names one (ease-out, ease-in-out, hold) it is fixed; unquoted intermediate curves are yours, provided nothing translates during a release.
- Video encoding, poster frame, loop point, bitrate ladder, and how the three canonical plates are packaged as sources — subject only to: one persistent environment system, never unmounted, never torn down, GPU-composited for the session. Packaging is engineering's call; the persistence of the system is not.
- Scroll-vs-timeline driving of each junction, and the input threshold that starts it.
- Reduced-motion path: hold each state and cross the exposure only; every junction is already an exposure change beneath its mechanism.
- Mobile placements for the Ledger rail, the Hero time and the Questions rows — not yet designed at any breakpoint.
- Answer panel height animation in Questions (the design fixes only that nothing above a row moves).

OPEN — TWO ITEMS, NEITHER BLOCKING THE BUILD

ITEM	STATE	NEEDED BY
Junction 04 → 05 thesis → occasions	Undecided by choice: both frames are type on warm dark with the negative beneath at -6, so material continuity already holds. The question is only whether the junction wants a short authored beat or is stronger as a plain hold. Build it as a hold; a beat can be added later without touching either state.	Not blocking. Decide during first build review.
Production plates	All storyboard imagery is extracted 1010px video frames and is storyboard-grade only. Of the three plates — hero, venice, studio — the studio still (studio_about.png, 455 × 302) is the weakest. States 10-12 need the real still or master footage; the Hero time treatment needs the graded master to be proofed against the loop's darkest and brightest passes.	Before visual QA, not before implementation starts.

11 • ENVIRONMENT CONTRACT — TWO RECONCILIATIONS

Both items below are documentation ambiguities, not design questions. Neither changes an approved state, transition, coordinate or line of copy. The canonical readings are the ones the storyboard already draws; what follows makes them explicit and closes them.

11.1 • STATE 09 / THE WORK

Current conflicting statements. §2 gives state 09 as plate venice at exposure 1.00 / true. §3 gives junction 08 → 09 as *lift* — “exposure lift only, the negative was always there”. The storyboard separately describes the work as a live experience rendered in code, full bleed. And the visual law requires one element, mounted once, never unmounted, never re-sourced.

Canonical interpretation — A, with one defined addition. These describe two different things that were never the same thing. **State 09 is the film:** the continuous environment element, venice plate, brought to true exposure by the 08 → 09 lift. It is a state of the environment, and nothing is mounted, swapped or fetched to reach it. The **live work surface is the reversible Work aside** (§6): a route entered from the Ledger’s leader rule, not a step in the fourteen-state sequence. The aside composites its surface *above* the environment, which keeps running beneath at its own grade and is never unmounted; leaving the aside returns the rail and the film to the state they were in.

Exact implementation rule. One persistent environment system for the whole session — mounted at the Hero, never unmounted, never torn down, never `display:none`, *including while the Work aside is open* — holding the three canonical plates and presenting each according to state. “Never re-sourced” is a property of that system, not a requirement that one media file contain all three plates. State 09 is that system at the venice plate, true exposure: no second surface, no iframe, no parallel environment. The live work surface exists only inside the Work aside, as an additive layer above the environment; it mounts on entering the aside and unmounts on leaving it, and it is never part of the fourteen-state sequence. A work surface that replaces the environment — or an environment paused, hidden or re-sourced to make room for it — breaks the law and the 08 → 09 lift together.

Wording correction. None to the storyboard — its state-09 frames and its Work aside are separate turns and neither is wrong. This spec was correct but silent on the boundary; §11.1 is that boundary, and §2’s row for 09 is to be read with it.

11.2 • THREE PLATES VS FOUR ASSETS

Current conflicting statements. §5 said three plates carry all fourteen states, then listed four files — `hero.png`, `venice.png`, `studio_about.png`, `dawn_warm.png`.

Canonical interpretation — three plates, one of which appears twice under two grades. `dawn_warm.png` is not a fourth environment. Warm stone at state 13 is the **hero plate’s own sky band**, enlarged and graded — which is exactly why the locked 13 → 14 can open the crop “on the same negative” and arrive at Contact’s hero grade with no swap. `dawn_warm.png` exists in the repository as a storyboard convenience: a pre-rendered still of that grade, so a static frame could show what the graded video will do. It is a **derivative, not a source**.

Exact implementation rule. Three plates ship: hero, venice, studio. Warm stone is authored as the hero plate under the state-13 grade — enlarged onto its sky band, exposure lifted to ground values 160-171 with R-B +26, desaturated, near-still — and never as its own asset. dawn_warm.png must not be referenced in production code. If warm stone loads as a separate image, states 13 and 14 become a swap and the locked 13 → 14 mechanism is void.

Wording correction. This spec only, now applied: §5 restored to three plates with the derivative named, §2's row for 13 reads "hero · sky band, graded", and the open production-plates item lists three. The storyboard needs no correction — its state-13 frames are storyboard stills and are labelled as such.

LOCKED — ENVIRONMENT CONTRACT

Nothing else is open. Thirteen junctions authored, twelve distinct verbs, fourteen states, all copy final. Where this document and any earlier storyboard turn disagree, this document governs; superseded explorations remain on file for reference only — turns 25, 28, 29 (rule-led and environment-led readings of 13 → 14), 31 (micro-caps dateline) and 32 A / C (editorial and signature time treatments).
